Specification

Applicant is reminded of the proper language and format for an abstract of the disclosure.

The form and legal phraseology often used in patent claims, such as "means," "**comprising**," and "said," should be avoided. The abstract should describe the disclosure sufficiently to assist readers in deciding whether there is a need for consulting the full patent text for details.

Claim Rejections - 35 USC § 112

Claims 9, 24, and 25 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Regarding claims 9 and 25, "any combination thereof" renders the claims indefinite because it is unclear how many of the recited limitation(s) would be part of the claimed invention. See MPEP § 2173.05(d).

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1 – 39 are rejected under 35 U.S.C. 102(b) as being anticipated by Moroto et al. (US 4,954,959).

Regarding claims 1 - 6, 10 – 12, 18 - 23, 27 - 29, 35, and 36, Moroto et al. teaches a database system for a navigation device, comprising: a first database comprising at least first data (device 16); a second database comprising at least second data independent of the first data (second device 17 is independent of device 16); where the first data comprises street information (from standard map data) and the second data comprises location information (individual guidance data); a working memory unit comprising a first memory area and a second memory area (items 16 and 17 are dedicated storage media with data sets), where the first data is stored in the first memory area and the second data is stored in the second memory area; and a processing unit (4; note col. 2, line 58 – col. 3, line 2; col. 4, line 58 – col. 5, line 28 at least). Moroto's teaching is a global positioning navigational system comprising a GPS receiver (10; see fig. 1 at least) that provides geographical position data to a navigation device (col. 4, lines 47 – 54 at least) and providing/presenting (displaying on item 5; fig. 1) the data (col. 5, lines 35 – 41 at least).

Art Unit: 3661

Regarding claims 7, 8, 24, and 25, Moroto's system supports location information relating to hotels, restaurants, monuments, events, sport stadiums, schools, hospitals, buildings (landmarks) data relating to traffic signals or signage, restrictions in the direction of a street, "no passing" limitations, and road-related weather conditions (col. 4, line 58 – col. 5, line 28 and lines 35 – 57; col. 7, lines 7 – 16; and col. 10, lines 10 – 35 at least).

Regarding claims 9 and 26, Moroto's teaching includes Points of Interest (col. 3, lines 12 – 15 and col. 5, lines 63 – 68 at least).

Regarding claims 13, 14, 30, and 31, Moroto's teaching further supports Random Access Memory (RAM) – (col. 5, lines 35 – 62 at least).

Regarding claims 15 – 17 and 32 – 34, Moroto's teaching supports a third database comprising blocks of data/index (note item 19).

Regarding claims 37 – 39, Moroto's teaching further supports identifying the location information according to a predetermined requirement (the predetermined requirement being based upon GPS signal reception; col. 4, lines 47 – 54 at least).
